

Did you know that
it's possible to make
your home warmer and
slash your heating bills
at the same time?

Your local council have joined forces with Warm Streets to show you how to take advantage of the free help available locally to make your home more energy-efficient.

A few simple measures will make your home warmer and give you lower bills.

Hard to believe? It makes perfect sense...

In the average home 25% of the heat loss happens through the roof and 35% through the walls. To keep your home comfortably warm, your heating system has to work extra hard to replace all this escaping heat.

But by having loft or cavity insulation fitted, you can stop the great escape, keeping the heat at home. Your heating system won't have to work so hard to keep up and your bills will tumble too. And what's more, you will also be doing your bit for the environment.

I want to insulate my home, but where do I go now?

Warm Streets are here to help. We will do all the legwork for you. We can come and assess your home free of charge, let you know if you qualify for any grants or special discounts and deal with contactors and other agencies on your behalf. That way you can have the home improvements without the hassle or the expense.

Who are Warm Streets?

Warm Streets are a not-for-profit organisation who are working in partnership with your local council to improve your quality of life and make your home more energy-efficient and environmentally-friendly.

What happens now?

Our advisors will assess the information you gave them about your home. If you qualify for any benefits or grants that you're not currently claiming, we will let you know and we will also make the necessary arrangements for you. Even if you don't qualify for financial help, there are still lots of discounts you can have on cavity and loft insulation and we will point you in the right direction.

Installing cavity and loft insulation is a simple procedure that is performed in under a day and is relatively mess-free. We only work with selected contractors who we know we can trust and we have strict quality control measures in place to make sure all work is carried out to the highest standards.

How much will this cost you?

In some cases, particularly if you receive certain benefits, you will be able to have energy efficiency measures installed free of charge. Our advisors will let you know if this is a possibility for you and we will also make the necessary arrangements on your behalf.

And if you don't qualify for any special financial help, don't despair. There will be discounts available to you for cavity and loft insulation, and any investment you make will quickly be offset by the savings you make on your heating bills.

Cavity wall insulation

Typical costs	Typical annual saving	You make your money back in...
£260 - £380	£65	4 to 6 years

Pitched roof insulation

Typical costs	Typical annual saving	You make your money back in...
£190 - £300	£80 - £100	2 to 3 years

* these costs and savings are estimated and may vary for different properties and different lifestyles.
